Art Unit: 1625

Claims 7,31,32,35-38,40,41,94,95,101,115-122 and 124-131 are again rejected under 35 U.S.C. 103(a) as being unpatentable over Merck WO 94/26731, in view of Ando et al, Haruta et al and Kimura et al. for the reasons of record.

A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

Claims 7,31,32,35-38,40,41,94,95,101 115-122 and 124-131 are provisionally rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-113 of copending Application No. 10/258493. This is a provisional double patenting rejection since the conflicting claims have not in fact been patented. The claims are drawn to the same material. A clear demarcation is required.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 119-121 and 129-131 drawn to methods of treating cancer are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. There are no tests

Art Unit: 1625

in the specification indicating any specific anti-cancer activity for the compounds.

Cancer covers a wide scope of pathology caused by different mechanisms. Thus treating cancer broadly is not enabled. Further there is no enablement for the specific conditions recited in claim 129.

Applicant's arguments filed 7-25-2005 have been fully considered but they are not persuasive. Applicant's invention is within the scope of the primary reference. The choice of fluoro as the halogen in the 2-position is clearly indicated by its preference in the same position of the analogous compounds of the secondary references.

Because of the new rejections this action is not made final.
